Sales KPI Reporting with Data Quality & SQL Validation (Power BI)

Public Dataset — Portfolio Demonstration
SQL Server (SSMS) • Power BI • Power Query • DAX

Goal

Build trusted sales KPIs with an audit-first workflow: DQ checks + SQL reconciliation.

Dataset & Scope

Source: AdventureWorksLT (Microsoft sample database)
Grain: 1 row = 1 sales order line (SalesOrderDetail)
Date coverage: 1 day (sample dataset) → trends limited

DQ Results (PASS)

Missing CustomerID: 0 | Missing ProductID: 0
Bad Qty (<=0): 0 | Bad UnitPrice (<0): 0 | Bad LineTotal (<0): 0

Validation (PASS)

Orders: 32 | Units: 2,087 | Revenue: 708,690.15
Diff (Power BI – SQL): 0

KPIs

Revenue, Orders, Units, AOV, Discount Amount, Discount %

Limitations

1-day date coverage (sample dataset).
